SUMMARY

Data Science graduate with hands-on experience in data analysis, machine learning, demand forecasting, and computer vision through internships and academic projects. Proficient in Python, data preprocessing, and model evaluation, with experience developing forecasting, OCR, recommendation, and deep learning solutions. Able to translate complex data into actionable insights and collaborate across teams to support informed business decisions and operational improvements.

PROFESSIONAL EXPERIENCE

Data Analyst Intern at PT Traktor Nusantara **August 2026 - Present**

- Analyze historical spare parts demand and inventory data to identify demand patterns and support data-driven inventory planning.
- Develop a machine learning-based demand forecasting model using Python and XGBoost to estimate demand at the SKU level.
- Translate demand forecasts into replenishment recommendations by incorporating lead time demand, stock on hand, incoming quantity, and net requirement calculations.
- Conduct market and industry research using relevant economic and manufacturing indicators to identify external factors that may influence industrial demand.
- Collaborate with the Material Handling Parts team to understand business processes and supply chain performance indicators, including Fill Rate, Days of Inventory, and Inventory Turnover.

Data Scientist Intern at BPPK **March 2025 - July 2025**

- Validated OCR extraction results by analyzing data quality metrics to ensure accurate and reliable document datasets for Retrieval-Augmented Generation (RAG) implementation.
- Developed an automated data processing pipeline to improve document extraction efficiency, streamline operational workflows, and enhance data processing performance using open-source technologies.
- Evaluated and benchmarked multiple embedding models by analyzing performance metrics and retrieval quality to support data-driven model selection and improve semantic search performance.
- Implemented a Collaborative Filtering-based recommendation system to enhance personalized content delivery and improve user engagement across the KLC platform.

KEY PROJECTS

Automated Document OCR System **March 2025 - July 2025**

- Conducted performance evaluation and data quality analysis of OCR extraction using Tesseract OCR and PyMuPDF on financial learning documents to ensure accurate and reliable text extraction.
- Developed an automated document preprocessing pipeline using object detection techniques to improve OCR accuracy, enhance data quality, and optimize document processing workflows.
- Performed dataset annotation and quality verification to ensure reliable training data and improve model performance.
- Built an automated OCR preprocessing pipeline to filter protected and irrelevant document elements from KAP and LKMS financial learning materials, improving text extraction quality and downstream data processing.

Project Repository

Rice Leaf Disease Semantic Segmentation (Final Thesis Project) **Dec 2025 - April 2026**

- Developed and evaluated deep learning-based semantic segmentation models (U-Net, PSPNet, and DeepLabV3+ with ResNet34 backbone) for rice leaf disease analysis.
- Performed data preprocessing, exploratory data analysis, model training, hyperparameter tuning, and comparative performance evaluation using Pixel Accuracy and Intersection over Union (IoU).
- Identified DeepLabV3+ as the best-performing model, achieving an IoU of 0.9804, and utilized the segmentation results to support disease severity quantification based on the IRRI Standard Evaluation System (SES).

Project Repository

EduDOExam: Online Examination System with Emotion Recognition **Sep 2024 - Jan 2025**

- Conducted data preprocessing, feature analysis, and model evaluation to improve emotion classification performance and ensure reliable prediction results.
- Developed and trained a deep learning-based emotion recognition model using facial image datasets, optimizing model performance through iterative evaluation and parameter tuning.
- Integrated the emotion recognition module into the online examination platform to enable real-time monitoring of student engagement and support data-driven educational insights.

Project Repository

EDUCATION

Aug 2022 - Jun 2026

Bachelor's Degree in Data Science
State University of Surabaya

- GPA: 3.74/4.00
- Relevant areas: Data Analysis, Machine Learning, Predictive Modeling, Artificial Intelligence, and Business Analytics.

AWARDS & ACHIEVEMENTS

• **Machine Learning Distinction Graduate — Bangkit Academy by Google, GoTo, and Traveloka (2025)**
Graduated with Distinction in the Machine Learning learning path, achieving a final average score of 96.3 through coursework and hands-on machine learning projects
• **Top 5 Best Capstone Project — Bangkit Academy by Google, GoTo, and Traveloka (2025)**
Recognized as one of the Top 5 highest-scoring capstone teams among 693 teams in Bangkit Academy for developing an AI-based solution.
• **Finalist of GEMASTIK (National Student Performance in ICT) (2023)**
Selected as a finalist in GEMASTIK, Indonesia's National Student Performance in Information and Communication Technology Competition.
• **Bronze Medalist — ASEAN Innovative Science, Environmental and Entrepreneur Fair (AISEEF) (2021)**
Awarded for an innovative scientific research project on sustainable alternative briquette materials.

CERTIFICATION

• TensorFlow Developer Specialization — DeepLearning.AI
• Machine Learning Specialization — DeepLearning.AI / Stanford University
• Structuring Machine Learning Projects — DeepLearning.AI
• Convolutional Neural Networks in TensorFlow — DeepLearning.AI
• Natural Language Processing in TensorFlow — DeepLearning.AI
• AWS Cloud Essentials Knowledge Certification — Amazon Web Services
English Proficiency Test (TEP) — State University of Surabaya | Score: 447

SKILLS

• **Programming**: Python
• **Data Analysis**: Data Cleaning, Data Preprocessing, Data Validation, Exploratory Data Analysis (EDA), Data Visualization
• **Machine Learning**: Predictive Modeling, Model Evaluation, Deep Learning
• **Computer Vision**: Semantic Segmentation, Image Processing, OpenCV
• **Frameworks & Tools**: Pandas, NumPy, Scikit-learn, TensorFlow, PyTorch, Jupyter Notebook, Google Colab
