Explore My Interactive Portfolio

about *me*

I'm a Data Science graduate with experience in business analytics, demand forecasting, and machine learning.

At Traktor Nusantara, I analyze spare-parts demand and develop SKU-level forecasts and replenishment recommendations to support inventory planning.

Previously, at BPPK, I worked on OCR validation, automated document processing, embedding model evaluation, and recommendation systems.

My work combines Python-based analysis with practical solution development, from forecasting operational demand to building computer vision models.

A Bangkit Machine Learning Distinction Graduate and Top 5 capstone team member, I focus on turning complex data into reliable insights and tools that support business decisions.

DPRIME

(Demand Forecasting-Driven Predictive Replenishment & Inventory Management Engine)

Develop SKU-level demand forecasts and translate inventory positions into replenishment recommendations.

output:

Forecast dashboard, order recommendations and Excel exports.

Project Overview↗

Github↗

Kaggle↗

Forecasting & Inventory Planning

SPARE

(Spare Parts Automated Retrieval Extension)

Develop a browser extension to collect spare-part price information and structure the results for analysis.

output:

Structured price records for review and comparison.

Project Overview↗

Github↗

Kaggle↗

Price Data Collection

CUSTOMATE

(Customs Document Automation)

Automate the preparation of goods description letters using part information and images.

output:

Editable document drafts for review before customs clearance.

Selected Internship Project
at Traktor Nusantara
(Astra International & Sumitomo Group)
by Maganghub Kemnaker 2026

project 1

Data and Automation

Data Analyst Intern / Material Handling Parts / Aug 2026 – Present

Undergraduate Thesis

UNESA
Universitas Negeri Surabaya

Project Overview↗

Kaggle↗ Github↗

project 2

Developed a two-stage deep learning framework for automated rice disease diagnosis and severity quantification using semantic segmentation. Compared multiple semantic segmentation architectures (U-Net, PSPNet, and DeepLabV3+) to identify the most effective model for pixel-level disease detection.

Integrated the best-performing model into a severity assessment pipeline based on the IRRI Standard Evaluation System (SES), achieving a Mean Intersection over Union (MIoU) of 0.92 and accuracy above 0.98.

The research was published in the Data Science Study Program Journal and an extended version is currently under review for publication in a SINTA 2 indexed journal.

Data Scientist Intern / BPPK / March 2025 - July 2025

project 3

Document Intelligence & Recommendation Systems

01 — Multimodal Content Extraction

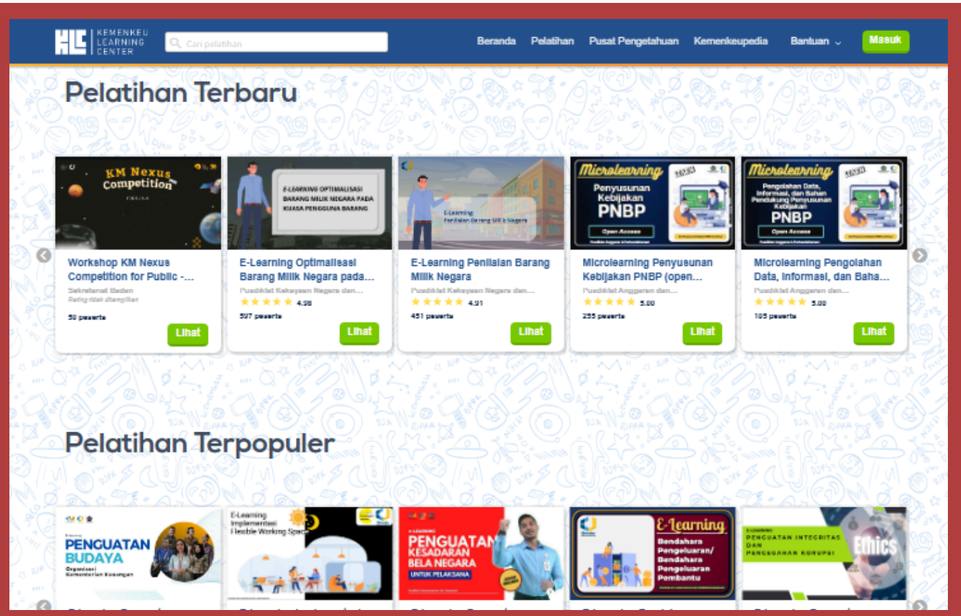

Project Overview↗

Github↗

Evaluated OCR and speech recognition tools to extract text from documents, audio, and video for KLC's knowledge processing workflows. Contributed to extraction quality validation and automated preprocessing for RAG preparation.
Output: Extraction workflows and comparative evaluation of conversion quality and processing time.

02 — Learning Content Recommendation

Contributed to research on personalized learning recommendations for KLC using collaborative filtering and content-based approaches. Evaluated recommendation models and multilingual embeddings to assess prediction performance and content relevance.
Output: Recommendation experiments and comparative model evaluation.

project 4

Bangkit Academy Capstone Project

Bangkit Academy led by Google, goto, and traveloka

My Contribution

Developed and integrated a facial emotion recognition model into an online examination platform. Handled image preprocessing, model training, hyperparameter tuning, and performance evaluation to support real-time emotion prediction.

Recognition

Top 5 Best Capstone Team among 693 teams.
Machine Learning Distinction Graduate with a final average score of 96.3.

AZARIA SYAHLA FITAN ADIBAH

has successfully completed the online, non-credit Specialization

Machine Learning

Congratulations on completing all three courses of the Machine Learning Specialization! You studied modern machine learning concepts, including supervised learning (linear regression, logistic regression, neural networks, decision trees), unsupervised learning (clustering, anomaly detection), recommender systems, and reinforcement learning. You learned some of the best practices for building machine learning models. You've also gained practical skills to apply machine learning techniques to challenging real-world problems. Now #BreakIntoAI and start building your career in machine learning!

DeepLearning.AI TensorFlow Developer

Congratulations! You have completed all 4 courses of the DeepLearning.AI TensorFlow: Developer Professional Certificate program. As part of this Professional Certificate program, you have learned: how to build and train neural networks using TensorFlow, how to improve network performance using convolutions as you train it to identify real-world images, how to teach machines to understand, analyze, and respond to human speech with natural language processing systems, and more! These and other TensorFlow concepts are going to be at the forefro n to an AI powered future.
